Test Charter

Field	Details
Mission	Explore the ATM web application's core transaction flows, input validation, PIN management, user interface, localization, and Mini Statement behavior on an **Android mobile device**.
Test Items	Login, PIN change, cash withdrawal, deposit, balance validation, withdrawal limits, Mini Statement, UI controls, Hindi localization, and time zone handling.
Test Environment	Android mobile phone. Browser and Android version: Chrome & Android 11. Application URL: https://atmsimulatorsystem.vercel.app
Test Data	Test accounts used during the session: 12345678, 44441111, and 87654321.
Approach	Use exploratory testing: interact with the application, vary inputs, observe responses, and follow new test ideas based on findings. Record actual results and investigate unexpected behavior.
Out of Scope	Database verification, and confirmation of business rules not available to the tester.
Risks / Focus Areas	Incorrect transaction handling, missing or misleading transaction history, weak PIN acceptance, insufficient input validation, responsive UI issues, incomplete localization, and time zone inconsistencies.
Completion Criteria	The planned areas have been explored; observations are documented; candidate defects have reproducible steps where possible; and unresolved questions or environment details are clearly identified.

Test Ideas

- Check successful and unsuccessful login behavior.
- Explore withdrawal and deposit amounts, including boundary and unusual values.
- Compare account balance and Mini Statement after successful and rejected transactions.
- Investigate withdrawal-limit behavior using values around the observed boundary.
- Check PIN-change validation, acceptance of easy-to-guess PINs, and session behavior after a PIN change.
- Check UI visibility on a mobile screen, especially when the Mini Statement contains many entries.
- Check the changing of languages .
- Investigate whether changing the time zone affects how transaction timestamps are displayed.
