[Change PIN] The system accepts letters and special characters when changing the PIN

Environment:

Windows - 11, Google Chrome – 155

Preconditions:

1. A valid demo account exists.
2. The account is active and not locked.
3. Log in using a valid demo account.

Steps:

1. Select "Change PIN".
2. Enter a PIN containing letters or special characters in the new PIN fields.
3. Click the "Change" button.

Expected results:

1. The system should accept valid numeric PINs only.
2. A success message should appear when the PIN is changed successfully.
3. An error message should appear when an invalid PIN is entered.

Actual results:

1. The system accepts letters and special characters when changing the PIN.
2. No error message appears when an invalid PIN is entered.
