[Mini Statement] Transaction timestamps follow the PC's date and time when they are changed

Environment: Windows - 11, Google Chrome – 155

Preconditions:

1. A valid demo account exists.
2. The account is active and not locked.
3. Log in using a valid demo account.

Steps:

1. Record the current PC date and time.
2. Perform a withdrawal using a valid amount.
3. Open Mini Statement and record the transaction timestamp.
4. Change the PC date and time.
5. Perform another withdrawal and check its timestamp in Mini Statement.
6. Restore the original PC date and time.
7. Perform a third withdrawal and check its timestamp in Mini Statement.

Expected results:

1. Transactions should appear in the Mini Statement in the correct order.
2. Transaction dates and times should be based on the system's actual time, not the PC's date and time settings.

Actual results:

1. Transactions appear in the correct order in the Mini Statement.
2. Transaction dates and times follow the PC system settings, causing some transactions to display the correct timestamp and others to display an incorrect timestamp.
