[Login] User cannot log in after entering alphabetic characters in the PIN field

Test object: Login / PIN Input Validation

Environment: Chrome and Android 11

Preconditions:

1. Having a valid account number (not locked)
2. Log in
3. The user is on the login screen.

Steps:

1. Having a valid account number
2. Login with that account
3. Go to Change PIN Activity
4. Enter alphabetic characters (e.g., `rrrr`) in the PIN field.
5. After receiving Password changed successfully , Log out
6. Attempt to log in again using the new PIN.
7. Nothing happened
8. Attempt to log in using the old PIN
9. Application reject it

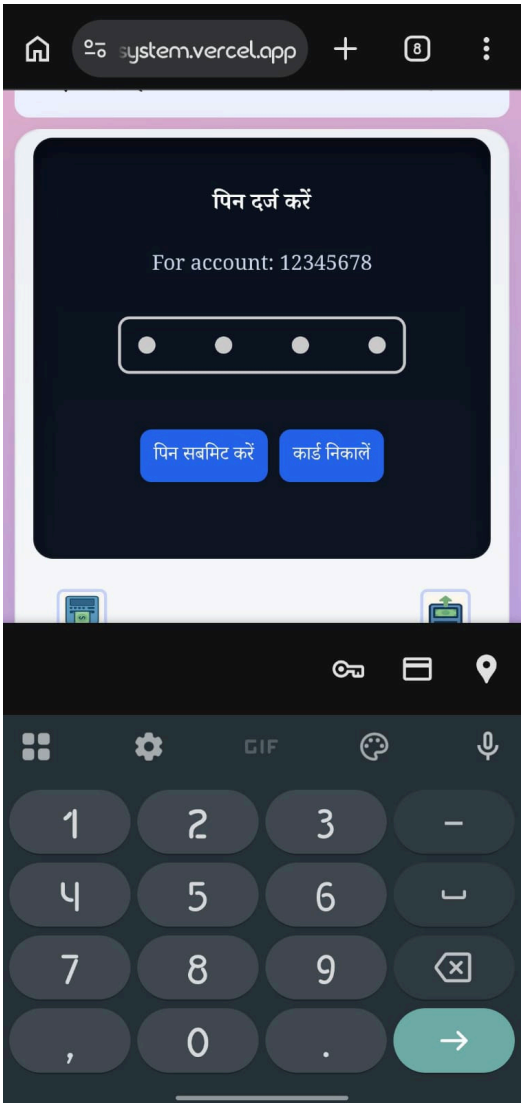

Expected Result:

1. Log in with a keyboard that contains Letters & numbers
2. The user should be able to log in using the new PIN.

Actual Result:

1. User can’t write the new password as there’s no letters available on the keyboard .
