Exploratory Testing Session Log

Field	Details
Application	ATM Web Application
Device	Android mobile phone
Browser / OS version	Chrome | Android 11
Date | Duration	21/10/2026 | 8:35 : 9:15
Charter	Explore ATM operations, PIN management, input validation, UI/localization, and Mini Statement behavior.

Session 1 — User 12345678: Transactions and PIN Management

Area	Action / Test Idea	Observed Result
Login	Logged in using the test account and PIN.	Login successful.
Withdrawal	Withdrew 100 from a displayed balance of 5,000.	Withdrawal successful; displayed balance became 4,900.
Insufficient balance	Attempted to withdraw 6,000.	Application displayed an insufficient-balance message. The attempt was not visible in the Mini Statement.
Deposit	Deposited 99.	Displayed balance became 4,999; operation appeared successful.
PIN change — same PIN	Attempted to set the new PIN to the existing PIN.	Application rejected the change with: "**New PIN cannot be same as old PIN**."
PIN change — 1111	Changed the PIN to 1111.	Application accepted the PIN. The user remained logged in after the change. After exiting, login with the new PIN succeeded.
Large withdrawal	Attempted to withdraw 1,000,000.	Application displayed a daily withdrawal limit exceeded message.
Withdrawal limit exploration	Tried 500,000; 50,000; 100,000; 200,000; and 100,001.	500,000 rejected; 50,000 and 100,000 successful; 200,000 and 100,001 rejected. **Observed boundary suggests a maximum of 100,000, subject to further confirmation.**
Deposit amount exploration	Tried amounts including 1, 1,000,000, and 0.5.	Application accepted the tested values without an apparent deposit limit.

Session 2 — User 44441111: Change language to hindi and Input Validation

Area	Action / Test Idea	Observed Result
PIN length	Attempted to enter a five-character PIN.	The application did not allow the extra character.
PIN confirmation empty	Entered new PIN 4444 and left confirmation empty.	Application displayed "PIN mismatch".
New PIN empty	Left new PIN empty and entered confirmation PIN 4444.	Application displayed "PIN must be 4 digits".
Hindi localization	Selected Hindi language in Light Mode and inspected the Back button and error messages.	Back button and error messages were not translated into Hindi.
Negative deposit	Attempted to deposit -50.	Application asked for a valid amount.
Very large deposit	Tried very large deposit amounts.	Application accepted the tested values without a deposit limit.
Alphabetic PIN input	Entered alphabetic characters (rrrr) in the PIN field, then logged out and tried to log in again.	**Could not access the account because the login keyboard only showed numbers.**

Session 3 — User 87654321: Mini Statement and Time Zone

Area	Action / Test Idea	Observed Result
Mini Statement	Logged in and withdrew 1,000.	The Mini Statement displayed the withdrawal correctly.
Time zone	Changed the application's time zone and then performed a withdrawal.	Mini Statement displayed the transaction using the newly selected time zone. Expected behavior needs confirmation before reporting a defect.

Session Summary

The sessions explored transaction flows, balance and withdrawal-limit validation, PIN management, input handling, mobile UI visibility, Hindi localization, and Mini Statement behavior. Observations requiring follow-up include inconsistent localization, PIN/input handling, apparent absence of a deposit limit, and transaction timestamp behavior.
